- Built using a semantic <section> with a bootstrap responsive grid system (row,col).

Each donation pack is bootstrap card with an image, text and price.

Add to cart buttons use data attributes for javascript to read ID, name and price

CSS enhancements include card shadows, gradients and hover effects for visual appeal

javascript dynamically handles the cart functionality when buttons are clicked.

# Your Donation Cart

Item	Qty	Subtotal
Emergency Medical Fund	<input type="button" value="-"/> 1 <input type="button" value="+"/>	\$40.00 <input type="button" value="X"/>

Automative discount:**10% off** when your Subtotal is more than **\$100**

Subtotal: \$40.00  
Discount: \$0.00

**Total donation:** **\$40.00**

[Continue to Checkout](#)

Rendered inside a semantic <section> with a responsive bootstrap layout

cart table buit using <table>, <tbody> and dynamic javascript DOM manipulation.

Javascript updates subtotal,discount, and total using array calculations and .reduce().

Javascript handles quantity chnages,removal of items and discount logic automatically.

Checkout button is programmily enabled only when cart contains items.

## Donor information

please check your information.some fields are not valid.

Full Name\*

Email\*

Phone\*

ZIP/Postal Code\*

Street address\*

confirm donation

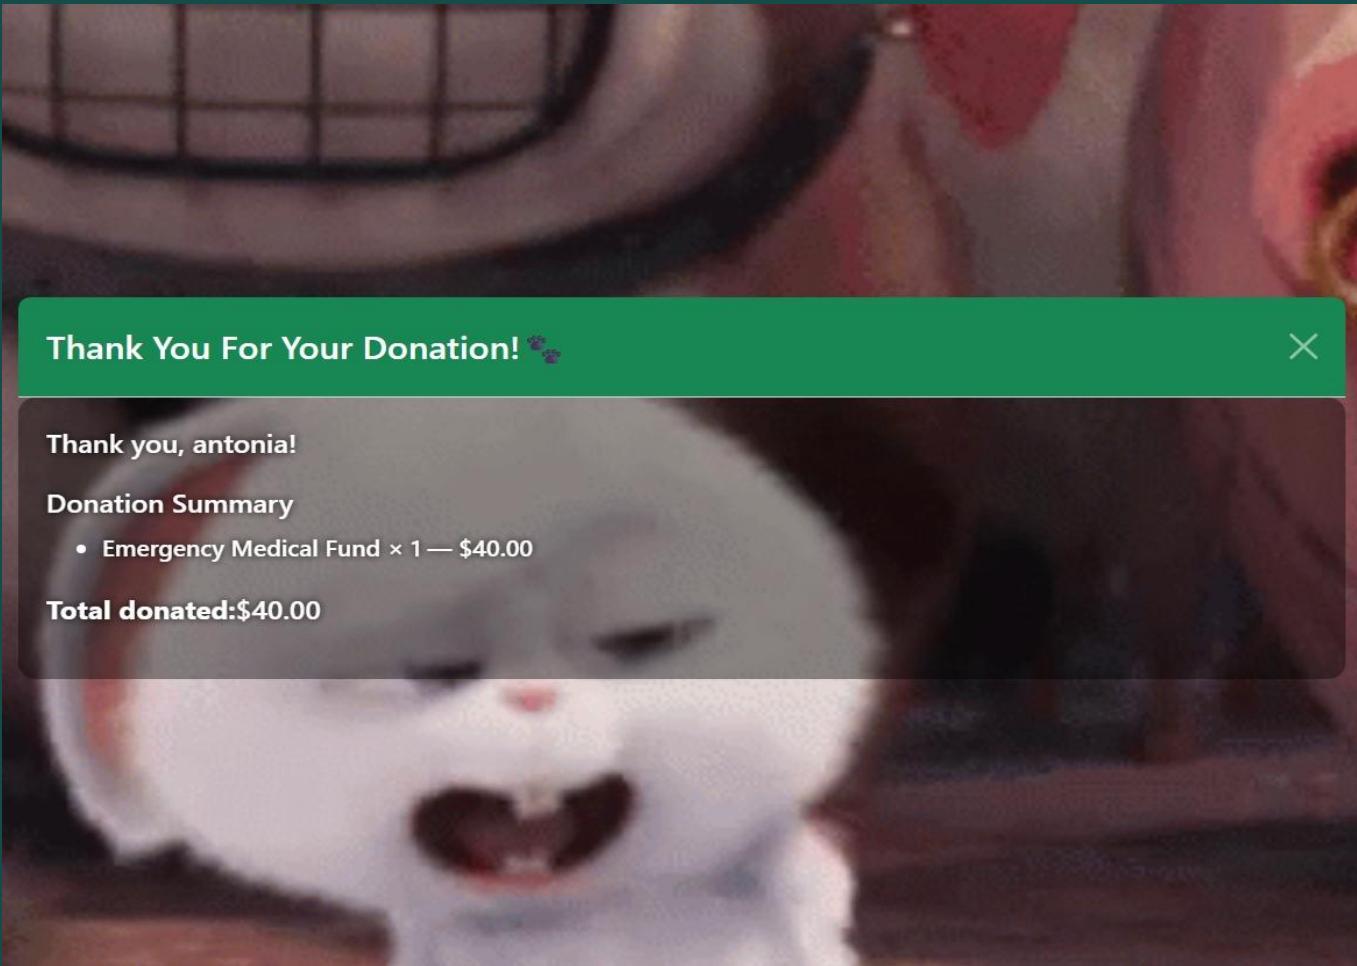

Implemented using a semantic `<form>` with labeled `<input>` fields for accessibility.

Uses HTML5 validation attributes(`required`,`type=email`,`maxlength`,etc).

Additional javascript validation checks phone number and ZIP formatting.

Styles using bootstrap form classes(`form-control`,`row`,`col-md*`).

On submit,javascript gathers donor data and displays a confirmation modal.

Created using bootstrap modal component triggered through javascript.

Javascript inserts donor name,donation summary and total dynamically into the modal.

Custom CSS applied for readability:white text,bold fonts,text-shadow,GIF background image.

Modal summarizes all cart items using javascript .forEach() on the cart array.

After closing,javascript resets the cart,form, and UI state for a clean user experience.
